Subject	MaxFlight Bulletin: In-Focus Projector System	Pages	1 (Including cover)
Sent	10/24/00 at 3:59:06 PM		

MESSAGE:

**Applicability: Only the: MT3000/VR2000, MT3000E and VR2000E with the InFocus Projector System**

**Purpose: To correct over driving of the InFocus Projector**

All users please follow these instructions and report compliance back to MaxFlight immediately.

1. The computer must be turned on, no programs should be running.
2. Right click the mouse, go to properties.
3. Go to settings, make sure you highlight screen number 1 and it reads: Default Monitor, 3d FX Series Interactive Inc, Voodoo Series Driver.
4. Set Screen size to 800 X 600, initiate apply.
5. Move the mouse to Advanced, left click the mouse.
6. Check the window, if "60 Hertz" is not entered, open the window using the arrow on the right side and change to "60 Hertz", then apply.
7. Exit the program by initiating the OK buttons.
8. Shut down the computer, Re-boot, then check the above settings to ensure that they have been saved.
